State-Level Data

The National Survey of Children's Health provides information on the health and well-being of children in the 50 States and the District of Columbia (D.C.). This section presents the survey findings for each State and D.C., including the percentage of children whose teeth are reported to be in excellent or good condition and the percentage of children who received a preventive dental care visit in the past year. These indicators are also shown by children's age, family income, race and ethnicity, and sex. These data are presented in comparison with the National statistics detailed in the previous section.
