

**U.S. Department of Health and Human Services  
Health Resources and Services Administration**

**REPORT TO CONGRESS**

**MATERNAL, INFANT, AND EARLY CHILDHOOD  
HOME VISITING PROGRAM**

**2023**

# Executive Summary

The Health Resources and Services Administration's (HRSA) Maternal, Infant, and Early Childhood Home Visiting (MIECHV) Program supports voluntary, evidence-based home visiting services for expectant and new parents with children up to kindergarten entry age who live in communities that are at risk for poor maternal and child health outcomes. Families partner with home visiting professionals – such as trained social workers, nurses, early childhood educators, and other health and social service providers – to improve health and well-being. The MIECHV Program builds on decades of research showing that home visits during pregnancy and early childhood improve the lives of children and families. Home visiting helps prevent child abuse and neglect, supports positive parenting, improves maternal and child health, and promotes child development and school readiness.<sup>1</sup> By developing strong relationships with families, providing regular home visits, assessing family needs, and delivering tailored services, the MIECHV Program supports the health and well-being of families.

The MIECHV Program is administered by HRSA's Maternal and Child Health Bureau in partnership with the Administration for Children and Families, which administers the Tribal MIECHV Program. The Tribal MIECHV Program develops, implements, and evaluates home visiting programs in American Indian and Alaska Native communities. The MIECHV Program and the Tribal MIECHV Program identify and serve priority populations (defined by statute) that are at risk for poor family outcomes, such as low-income families, people with a history of substance abuse, and families with children who have developmental delays or disabilities.

Awardees implement evidence-based models for home visiting that meet criteria established by the U.S. Department of Health and Human Services for this purpose and that have been vetted through the Home Visiting Evidence of Effectiveness review. In fiscal year (FY) 2022, 20 home visiting models were eligible for implementation with MIECHV Program funds. An awardee may use up to 25 percent of their award to implement and evaluate promising approach models, which are home visiting models that are not yet deemed to be evidence-based. In FY 2022, MIECHV awardees implemented 11 evidence-based models and three awardees implemented and evaluated promising approaches. Currently, only one home visiting model meets U.S. Department of Health and Human Services criteria for evidence of effectiveness in tribal communities, and most Tribal MIECHV grant recipients implement home visiting programs that are considered promising approaches for serving American Indian and Alaska Native populations.

In December 2022, the authorization for the MIECHV Program was extended through section 6101 of the Consolidated Appropriations Act, 2023 (P.L. 117-328), and funds were appropriated for FY 2023 through FY 2027. The reauthorization of the MIECHV Program doubled federal appropriations for evidence-based home visiting by FY 2027, including through a new matching grant option. It also increased the funding set aside for grants to tribal organizations from 3 percent of appropriations in FY 2022 to 6 percent from FYs 2023 through 2027. The reauthorization introduced new program components, including an annual report to Congress, the

---

<sup>1</sup> U.S. Department of Health and Human Services, Administration for Children and Families. (n.d.) Home visiting evidence of effectiveness: What is home visiting evidence of effectiveness? <https://homvee.acf.hhs.gov>

creation of a new web-based outcomes dashboard, establishment of new parameters on the use of virtual home visiting, reduction in administrative burden, and an emphasis on providing targeted, intensive home visiting services.

In response to the long-recognized need to support and sustain a qualified home visiting workforce, the reauthorization included a new reservation of appropriations for workforce support, retention, and case management. HRSA used these funds to establish the Institute for Home Visiting Workforce Development, which addresses the challenges of recruiting and retaining a highly qualified home visiting workforce. This institute includes the Jackie Walorski Center for Evidence-Based Case Management.

This report includes information and program data for FY 2022, prior to reauthorization of the MIECHV Program in December 2022. In FY 2022, grants were awarded to all 50 states, the District of Columbia, and five U.S. territories to deliver coordinated, comprehensive, high-quality, and voluntary early childhood home visiting services to eligible families. Awardees provided 841,694 home visits to 137,802 parents and children in over 1,000 counties, of which approximately 60 percent were rural.

The Tribal MIECHV Program funded 30 grant recipients to plan and deliver home visiting services. A total of 1,798 adults and 1,691 children received home visiting services through the Tribal MIECHV Program in FY 2022.

Despite ongoing challenges posed by the COVID-19 pandemic and a shortage of qualified home visiting professionals throughout the country, MIECHV Program awardees maintained steady progress toward meeting the program goals through FY 2022. Their progress is measured by 19 performance indicators in six statutorily defined benchmark areas:

- Improved maternal and newborn health;
- Reduced child injuries, maltreatment, and emergency department visits;
- Improved school readiness and achievement;
- Reduced crime or domestic violence;
- Improved family economic self-sufficiency; and
- Improved coordination and referrals for community resources.

MIECHV had the following key achievements in FY 2022:

- Seventy-nine percent of children enrolled in MIECHV had a family member who read, told stories, or sang with them on a daily basis, which increases a child's vocabulary and literacy skills. This performance is a significant, sustained improvement since it was first measured in FY 2017 (61 percent).
- Eighty-one percent of caregivers enrolled in MIECHV were screened for depression within 3 months of enrollment or delivery. Early screening for and identification of postpartum depression can benefit the entire family. This performance is consistent with the historically high rate of depression screenings that MIECHV awardees delivered (81 percent 3-year rolling average, FY 2019 to FY 2021).
- Seventy percent of children enrolled in MIECHV received the most recent recommended well-child visit as described in the Bright Futures Periodicity Schedule developed by the American Academy of Pediatrics, which establishes Recommendations for Preventive

Pediatric Health Care. This figure is an increase from a 3-year rolling average of 67 percent (FY 2019 to FY 2021), despite substantial disruptions during the COVID-19 pandemic.<sup>2</sup>

- Seventy percent of mothers enrolled in MIECHV had a postpartum visit within 8 weeks of delivery, which enables new mothers to get information on what to expect and to raise their questions and concerns about physical, social, and emotional changes.<sup>3,4</sup> This performance represents a 4 percent increase from a 3-year rolling average of 66 percent (FY 2019 to FY 2021).

# I. Legislative Requirement

Title V, section 511, of the Social Security Act, as amended by the Consolidated Appropriations Act, 2023 (P.L. 117-328), Division FF, section 6101 (December 29, 2022), requires the following report to Congress:

*“ (j) ANNUAL REPORT TO CONGRESS. – By December 31, 2023, and annually thereafter, the Secretary shall submit to the Congress a written report on the grants made under this section for the then preceding fiscal year, which shall include –*

- (1) an eligible entity-by-eligible entity summary of the outcomes measured by the entity with respect to each benchmark described in subsection (e)(5) that apply to the entity;*
- (2) information regarding any technical assistance funded under subparagraph (B) and (C) of subsection (k)(2), including the type of any such assistance provided;<sup>5</sup>*
- (3) information on the demographic makeup of families served by each such entity to the extent possible while respecting participant confidentiality, including race, educational attainment at enrollment, household income, and other demographic markers as determined by the Secretary;*
- (4) the information described in subsection (d)(1)(E);<sup>6</sup>*
- (5) the estimated share of the eligible population served using grants made under this section;*
- (6) a description of each service delivery model funded under this section by the eligible entities in each State; and the share (if any) of the grants expended on each model;*
- (7) a description of non-Federal expenditures by eligible entities to qualify for matching funds under subsection (c)(4);<sup>7</sup>*
- (8) information on the uses of funds reserved under subsection (k)(2)(C);<sup>8</sup>*
- (9) information relating to those eligible entities for which funding is reserved under subsection (k)(2)(A), with modifications as necessary to reflect tribal data sovereignty, data privacy, and participant confidentiality;<sup>9</sup>*
- (10) a list of data elements collected from eligible entities, and the purpose of each data element in measuring performance or enforcing requirements under this section.”*

This report includes information and program data on each of these requirements and related program activities and initiatives for fiscal year (FY) 2022, which occurred prior to the reauthorization of the Maternal, Infant, and Early Childhood Home Visiting (MIECHV) Program on December 29, 2022. The report discusses how these activities and initiatives align with the mission of the MIECHV Program statutory authority. Information about FY 2023 activities, including on new reservations and requirements for grant matching funds introduced in FY 2023, will be included in the 2024 report to Congress.

---

<sup>5</sup> The subsection describes reservations of appropriations. The subparagraphs describe appropriations reserved for technical assistance, including workforce-related technical assistance.

<sup>6</sup> The subsection addresses demonstration of improvement. It describes the requirements for programs to continuously demonstrate achievement of benchmarks and outlines the procedures for programs that fail to demonstrate improvement.

<sup>7</sup> The subsection addresses grant amounts. It describes the requirements for determining matching grant amounts, including the amount of obligations from non-federal funds.

<sup>8</sup> The subsection describes appropriations reserved for workforce support, retention, and case management.

<sup>9</sup> The subsection describes appropriations reserved for grants to tribal organizations.

## II. Introduction

Since 2010, the Health Resources and Services Administration’s (HRSA) MIECHV Program has enabled states, jurisdictions, and tribes to provide families with the tools they need to thrive. The MIECHV Program supports voluntary, evidence-based home visiting services for expectant and new parents with children up to kindergarten entry age who live in communities that are at risk for poor maternal and child health outcomes. Families choose to participate in home visiting programs and partner with home visiting professionals – such as trained social workers, nurses, early childhood educators, and other health and social service providers – to set and achieve goals that improve their health and well-being. The MIECHV Program builds on decades of research showing that home visits during pregnancy and early childhood improve the lives of children and families.

Home visiting helps prevent child abuse and neglect, supports positive parenting, improves maternal and child health, and promotes child development and school readiness.<sup>10</sup> Home visiting can also be cost-effective in the long term, through reduced spending on government programs and increased individual earnings.<sup>11</sup> By developing strong relationships with families, providing regular home visits, assessing family needs, and delivering tailored services, the MIECHV Program supports the health and well-being of families.

### *State and Jurisdiction Program Overview*

The goals of the MIECHV Program are to:

- identify and provide comprehensive home visiting services to improve outcomes for eligible families living in at-risk communities;
- improve coordination of services for at-risk communities; and
- strengthen and improve programs and activities that address preventive and primary care services for pregnant people, infants, and children under Title V of the Social Security Act.

The MIECHV Program, administered by HRSA’s Maternal and Child Health Bureau, provides funds to states, jurisdictions, and nonprofit organizations (hereafter referred to as “awardees”). Through a needs assessment, MIECHV awardees identify and prioritize communities at risk for certain adverse family outcomes and target populations they intend to serve. The MIECHV statute identifies the following populations that MIECHV awardees should prioritize for home visiting services:<sup>12</sup>

- Low-income people;<sup>13</sup>

---

<sup>10</sup> See footnote 1.

<sup>11</sup> Michalopoulos, C., Faucetta, K., Warren, A., & Mitchell, R. (2017). Evidence on the long-term effects of home visiting programs: Laying the groundwork for long-term follow-up in the Mother and Infant Home Visiting Program Evaluation (MIHOPE). OPRE Report 2017-73. Office of Planning, Research and Evaluation, Administration for Children and Families, U.S. Department of Health and Human Services. <https://www.acf.hhs.gov/opre/report/evidence-long-term-effects-home-visiting-programs-laying-groundwork-long-term-follow>

<sup>12</sup> Social Security Act, 42 U.S.C. 711 § 511(d)(4), as amended by section 6101 of the Consolidated Appropriations Act, 2023 (P.L. 117-328). [https://www.ssa.gov/OP\\_Home/ssact/title05/0511.htm](https://www.ssa.gov/OP_Home/ssact/title05/0511.htm)

<sup>13</sup> Low income is defined as income at or below 100 percent of the 2022 federal poverty guidelines (\$27,750 for a family of four).

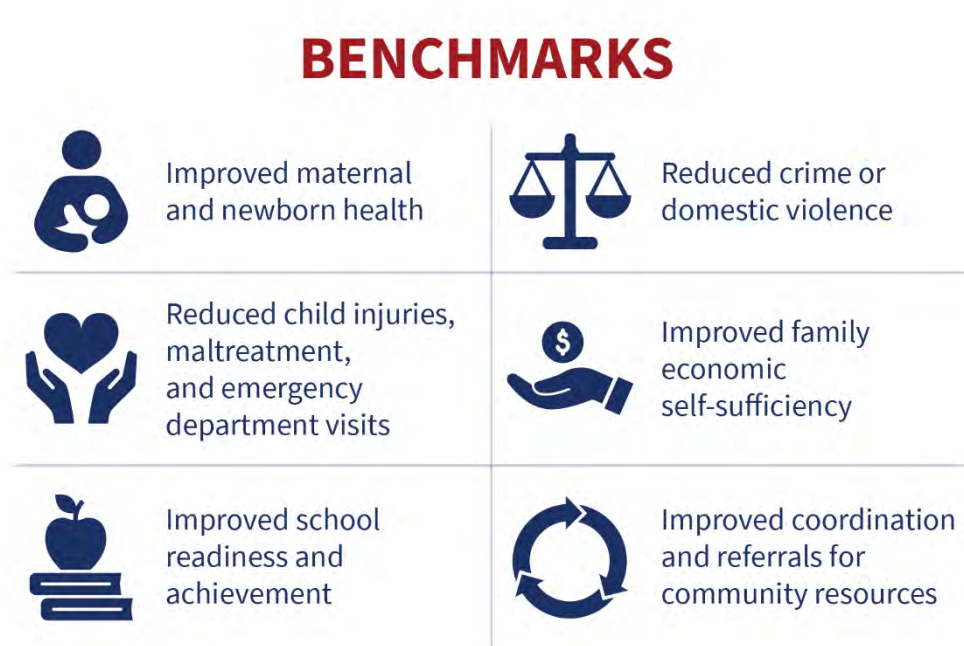

- Pregnant women under the age of 21;
- People with a history of child abuse or neglect or who have had interactions with child welfare services;
- People with a history of substance abuse or who need substance abuse treatment;
- People who use tobacco products in the home;
- People who are or have children with low student achievement;
- People with children who have developmental delays or disabilities; and
- People who are serving or formerly served in the Armed Forces, including such families that have members of the Armed Forces who have had multiple deployments outside of the United States.

MIECHV awardees have the flexibility to select home visiting service delivery models that best meet specific state and local needs. By law, awardees must spend the majority of their funding to implement evidence-based home visiting models, with up to 25 percent of funding available to implement promising approaches that will undergo rigorous evaluation.

Awardees deliver high-quality home visiting services to improve target outcomes in six statutory benchmark areas (see Figure 1).

**Figure 1: MIECHV Program Benchmarks**

The FY 2022 performance measure data demonstrate the continued impact of home visiting programs in several areas. For example, home visiting programs have led to substantial improvements in:

- family behavior that contributes to children's early language and literacy skills,
- uptake of well-child and postpartum care, and
- screening for postpartum depression and receipt of recommended services for those who need them.

(See [section V, MIECHV Program Outcomes](#), for more details.)

### ***FY 2022 Program Funding***

The MIECHV Program is authorized under Title V, section 511, of the Social Security Act, as amended by the Consolidated Appropriations Act, 2023 (P.L. 117-328), Division FF, section 6101. Public Law 117-328 appropriated funding for the MIECHV Program for FY 2023 through FY 2027. For FY 2022, the MIECHV Program was appropriated \$400 million and funded all 50 states, the District of Columbia, and five U.S. territories. Of total appropriations, 3 percent was reserved to support grants to Indian tribes, tribal organizations, or urban Indian organizations (see [section VI: Tribal MIECHV Program](#)). Another 3 percent was set aside to support the MIECHV Program's portfolio of research, evaluation, continuous quality improvement (CQI), and performance measurement.

The MIECHV Program also received supplemental appropriations through the American Rescue Plan Act of 2021 (ARP Act) (P.L. 117-2), Section 9101, during the COVID-19 pandemic. The ARP Act appropriated funding for MIECHV services and supports for families affected by the COVID-19 pandemic. HRSA awarded two rounds of ARP Act funding to its 56 MIECHV Program awardees: approximately \$40 million in April 2021 and approximately \$82 million in December 2021. These funds enabled awardees to address immediate and ongoing needs of parents, children, and families related to the COVID-19 public health emergency, including support for home visiting service delivery and the expansion of services to eligible families.

## **III. Home Visiting Models**

The MIECHV authorizing statute requires eligible entities to spend a majority of grant funding to implement home visiting service delivery models found to be effective according to the U.S. Department of Health and Human Services (HHS) criteria of effectiveness for evidence-based models. Eligible entities can use no more than 25 percent of grant funds to conduct and evaluate programs that use promising approaches, i.e., models that are not yet deemed to be evidence-based, which may also help build the evidence base toward meeting HHS's evidence-of-effectiveness standards. The Home Visiting Evidence of Effectiveness project conducts a thorough and transparent review of potential home visiting models to identify those that qualify as evidence-based. HRSA may make additional determinations about which models meeting HHS criteria for evidence of effectiveness align with MIECHV statutory and program requirements. In FY 2022, 20 home visiting models were eligible for implementation with MIECHV funds.<sup>14</sup>

MIECHV awardees can implement one or more approved models, provided that the selected model(s) (1) meets the needs of the identified at-risk communities or specific target populations identified by the statute, (2) provides the best opportunity to achieve meaningful outcomes in benchmark areas and measures; and (3) is implemented effectively with fidelity based on available resources and support from the national model developer. The selected model(s) should also be well matched to the needs of the awardee's early childhood system.

---

<sup>14</sup> HRSA has since added three models to the list of evidence-based models eligible for implementation for FY 2023. For more details, see <https://homvee.acf.hhs.gov/HRSA-Models-Eligible-MIECHV-Grantees>.

## ***Home Visiting Models in Use***

In FY 2022, MIECHV awardees implemented 11 evidence-based models and evaluated three promising approaches (see Table 1). Detailed descriptions and evidence of effectiveness for each of the models can be found on the Home Visiting Evidence of Effectiveness website.<sup>15</sup>

**Table 1: Home Visiting Models in Use**

<b>Evidence-Based Model</b>	<b>Number of Awardees Implementing in FY 2022</b>
Healthy Families America	39
Nurse-Family Partnership	38
Parents as Teachers	36
Early Head Start – Home-Based Option	9
Home Instruction for Parents of Preschool Youngsters	5
SafeCare Augmented	4
Family Spirit	2
Maternal Early Childhood Sustained Home-Visiting	2
Child First	2

Health Access Nurturing Development Services	1
<b>Promising Approach Implemented in FY 2022</b>	<b>State</b>
Following Baby Back Home	Arkansas
Health Start	Arizona
Team for Infants Exposed to Substance Abuse	Kansas

## ***Fund Expenditure by Model***

HRSA does not currently collect awardee expenditure data by each model they implement. HRSA will require awardees to submit this information in forthcoming reports, starting with expenditures for FY 2021 awards, covering the period of September 30, 2021, to September 29, 2023.

## **IV. MIECHV Program Reach and Demographics**

### ***MIECHV Program Reach***

In FY 2022, the 56 MIECHV awardees provided 841,694 home visits to 137,802 parents and children in 69,571 families. The program served 1,013 counties – a 23 percent increase in the number of counties served since 2015. These counties represent the at-risk communities that state and jurisdiction awardees have identified through their statewide needs assessments and account for 43 percent of all urban counties and 26 percent of all rural counties in the United

---

<sup>15</sup> See footnote 1.

States.<sup>16</sup> Supplemental ARP Act funding distributed to MIECHV awardees supported further expansion of service delivery in FY 2022 in 71 counties, 15 of which were not served through MIECHV before receiving ARP Act funds.

The MIECHV Program served more than 69,000 families in FY 2022, which represents an estimated 14 percent of the more than 488,000 families who were likely eligible for MIECHV services.<sup>17</sup>

Figure 2 shows enrollment in the MIECHV Program since FY 2018. Declines in enrollment in FY 2020 through FY 2022 reflect the impact of the COVID-19 pandemic on enrollment and service delivery, as well as significant challenges with workforce recruitment and retention across the field of early childhood care and education.

**Figure 2: Households Served by MIECHV, FY 2018 – 2022**

### ***Demographics of Participating Families***

The following section presents a national snapshot of the characteristics of program participants that the MIECHV Program served in FY 2022 (see Figure 3 for additional details). Appendix A provides additional demographic information by awardee. In FY 2022, 71,048 adults and 66,754 children received home visiting services. About 40 percent of participants were newly enrolled in the MIECHV Program in FY 2022, while the rest were continuing from the prior year.

Of adult participants, 30 percent were pregnant at enrollment, 67 percent were nonpregnant female caregivers, and 3 percent were male caregivers. The majority of adult participants (62 percent) were under 30 years old and most children (81 percent) were under age 3.

---

<sup>16</sup> Rural and urban county designations follow the HRSA Federal Office of Rural Health Policy (FORHP) definitions. Please note that some urban counties may include rural sub-county areas according to FORHP definitions. For more information on FORHP definitions on rural populations, please visit FORHP's website at <https://www.hrsa.gov/rural-health/about-us>.

<sup>17</sup> HRSA internal analysis using 2022 U.S. Census Bureau American Community Survey Public Use Microdata Sample data.

Ninety-three percent of households enrolled in MIECHV had incomes less than 200 percent of the Federal Poverty Level (FPL). In addition, 3 percent of the households experienced homelessness and another 3 percent lived in public housing. More than half of adult participants had a high school diploma or less (60 percent).

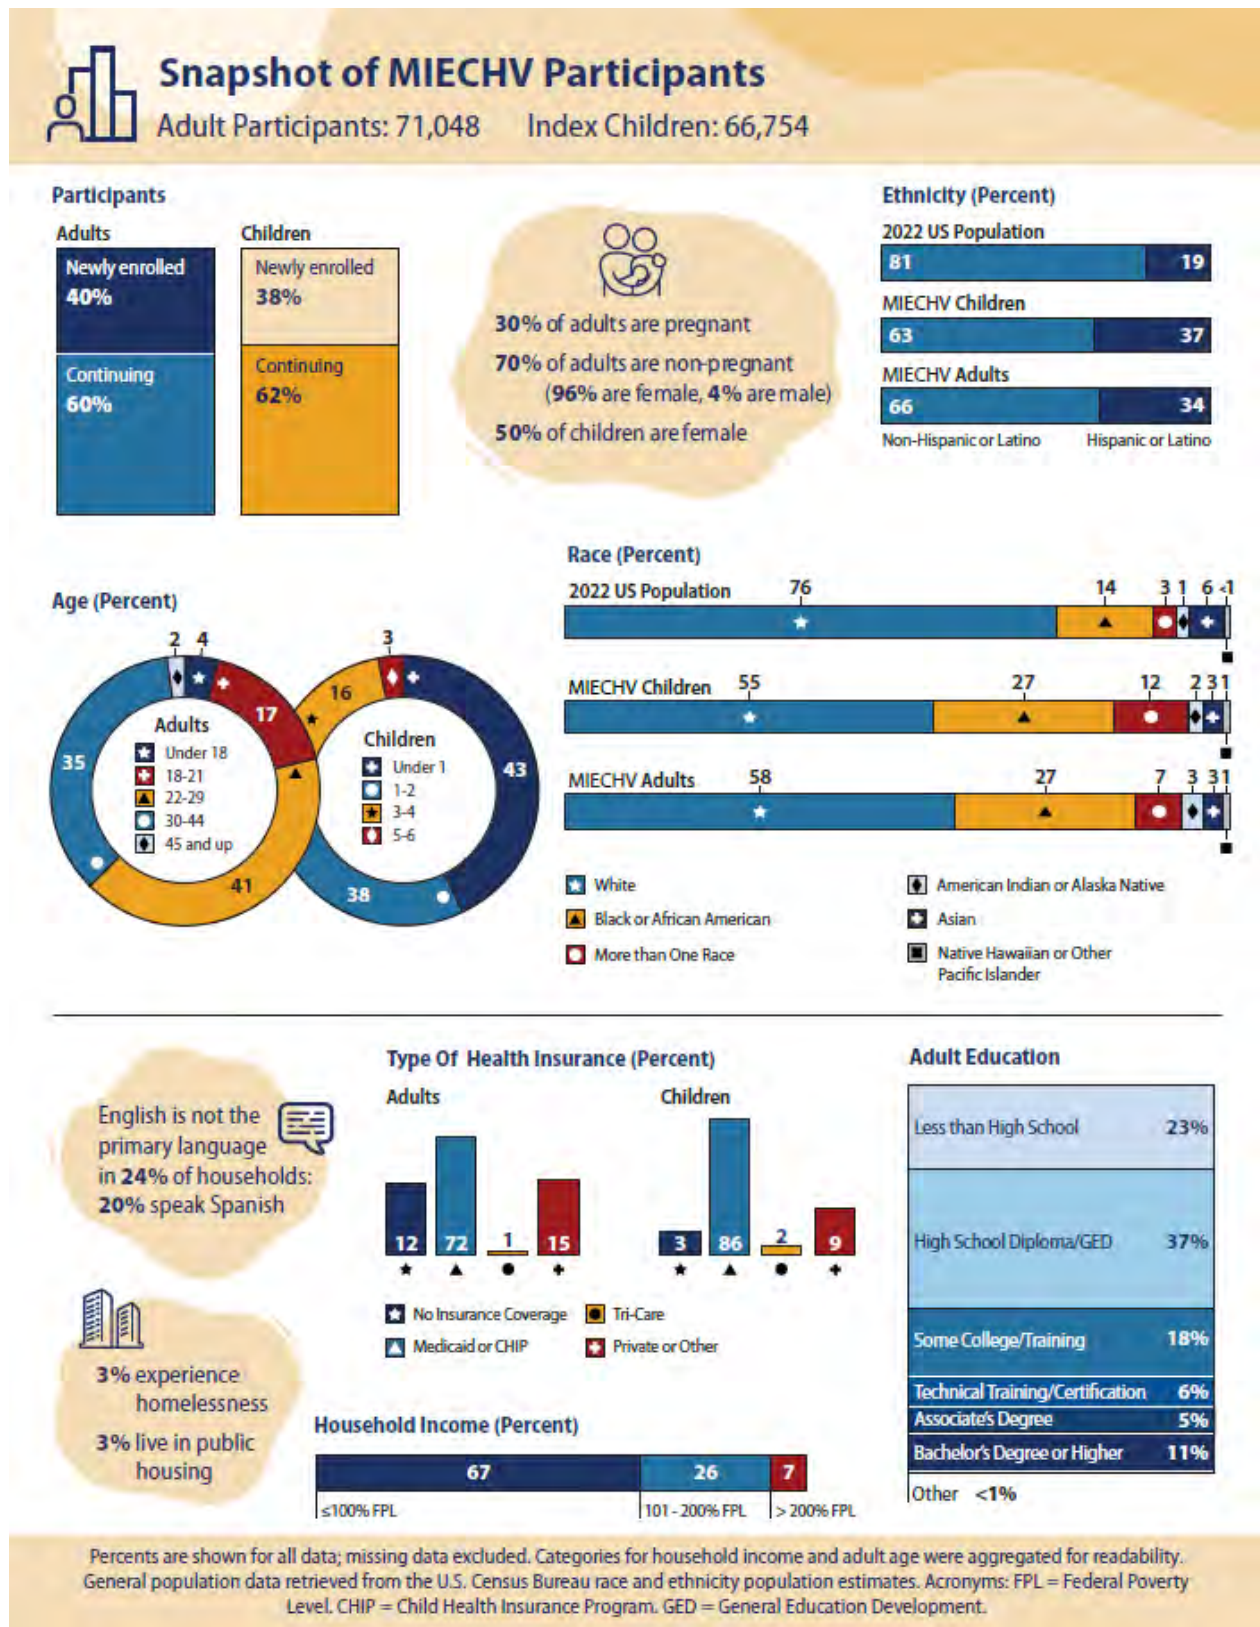

Most adult and child participants were white (58 percent were adults and 55 percent were children, respectively, compared with 76 percent of the general population<sup>18</sup>). Black or African American adults and children each made up 27 percent of participants, respectively (compared with 14 percent of the general population). Approximately 35 percent of adults and children were Hispanic or Latino (compared with 19 percent of the general population).

About 24 percent of child participants resided in a household where English is not the primary language. A total of 20 percent of households spoke Spanish as the primary language. Other commonly used primary languages include Tagalog, Arabic, Haitian Creole, Samoan, and Vietnamese. Most adults and children (72 percent and 86 percent, respectively) were insured through Medicaid or the Children's Health Insurance Program. Figure 3 summarizes various demographic factors of MIECHV participants.

---

<sup>18</sup> General population data retrieved from the 2022 U.S. Census Bureau race and ethnicity population estimates.

**Figure 3: Overview of MIECHV Program Participants, FY 2022**

The MIECHV Program has consistently identified and served priority populations that are at risk for poor family and child outcomes. For example, in FY 2022, of all MIECHV households, 93 percent had incomes at or below the 200 percent of the FPL with 67 percent of households having incomes at or below 100 percent of the FPL, and 19 percent reported a history of child abuse and maltreatment. Figure 4 shows the proportion of MIECHV participants by each statutorily defined priority population.

**Figure 4: Priority Populations among MIECHV Households, FY 2022**

## V. MIECHV Program Outcomes

### *MIECHV Performance Measures*

MIECHV awardees collect and report on performance data to track their program's performance, identify areas for improvement, and ensure that services result in measurable improvement for families and communities. In 2016, HRSA underwent a year-long process that included input from state awardees, federal partners, home visiting model developers, and other interested parties to revise the performance reporting requirements.

The MIECHV performance measurement system used in FY 2022 includes 19 required and two optional measures across the six benchmark areas. The measures are categorized into two types: performance indicators which demonstrate the effects of home visiting alone and systems outcomes which track effects that are less sensitive to change from home visiting alone due to factors that are outside of home visiting's control, such as the environment in which the program operates. For additional details on each performance measure, refer to this summary on HRSA's website.<sup>19</sup>

Figure 5 summarizes the MIECHV national outcomes of the 19 performance measures for FY 2022. The data showed variation in improvement both across and within benchmark areas. MIECHV had the following key achievements in FY 2022:

- Seventy-nine percent of children enrolled in MIECHV had a family member who read, told stories, or sang with them on a daily basis, which increases a child's vocabulary and literacy skills. This performance is a significant, sustained improvement since it was first measured in FY 2017 (61 percent).

<sup>19</sup> HRSA Maternal & Child Health. (n.d.) Maternal, Infant, and Early Childhood Home Visiting Program. <https://mchb.hrsa.gov/sites/default/files/mchb/programs-impact/performance-indicators-sys-outcomes-summary.pdf>

- Eighty-one percent of caregivers enrolled in MIECHV were screened for depression within 3 months of enrollment or delivery. Early screening for and identification of postpartum depression can benefit the entire family. This performance is consistent with the historically high rate of depression screenings that MIECHV awardees delivered (81 percent 3-year rolling average, FY 2019 to FY 2021).
- Seventy percent of children enrolled in MIECHV received the most recent recommended well-child visit as described in the Bright Futures Periodicity Schedule developed by the American Academy of Pediatrics, which establishes Recommendations for Preventive Pediatric Health Care. This figure is an increase from a 3-year rolling average of 67 percent (FY 2019 to FY 2021), despite substantial disruptions during the COVID-19 pandemic.<sup>20</sup>
- Seventy percent of mothers enrolled in MIECHV had a postpartum visit within 8 weeks of delivery, which enables new mothers to get information on what to expect and to raise their questions and concerns about physical, social, and emotional changes.<sup>21,22</sup> This performance represents a 4 percent increase from a 3-year rolling average of 66 percent (FY 2019 to FY 2021).

In their FY 2022 performance reports, awardees described successes resulting from CQI efforts, collaborations with community partners, and improvements in data collection, monitoring, and reporting. They faced challenges around model-specific data issues, continued pandemic-related barriers, and identifying or adapting screening tools and measures that are relevant to diverse populations. The performance measures for each awardee are available on HRSA's website through state fact sheets.<sup>23</sup>

Figure 5: MIECHV Performance Measures, FY 2022

## MIECHV Performance Measures: 2022 National Averages

### Crime or Domestic Violence

### Family Economic Self-Sufficiency

### Coordination & Referrals

## *Demonstration of Improvement*

Every 3 years, MIECHV awardees must demonstrate improvements for eligible families participating in the MIECHV Program in at least four of the six benchmark areas, using annual

performance data on the 19 performance measures.<sup>24</sup> Awardees that do not show improvement in at least four of the benchmark areas (as compared with the outcomes of eligible families who do not receive services under an early childhood home visitation program) must develop and implement a plan to improve outcomes with technical assistance (TA) provided by HRSA. If a recipient continues to not demonstrate improvement after the full implementation of an Outcome Improvement Plan and subsequent reassessment, or does not submit a required performance report, HRSA must terminate the grant award.

In the most recent assessment, conducted in FY 2020, all 56 MIECHV awardees successfully met the requirements for demonstration of improvement. Appendix B provides a summary of results by awardee for FY 2020. HRSA will conduct the next assessment following FY 2023 and every 3 years thereafter.

### ***Required Data Elements***

MIECHV awardees are required to collect data and report on their program's performance through annual and quarterly performance reporting. Appendix C lists specific data elements required and their purpose. In addition to tracking performance at national and awardee levels and enforcing requirements, HRSA also uses the collected information for the following purposes:

- Direct TA resources to enhance home visiting service delivery and improve performance,
- Target specific topic areas for CQI priorities to improve performance or measurement,
- Communicate with interested parties about the outcomes of the MIECHV Program,
- Identify areas that would benefit from additional research and evidence, and
- Identify and address strengths and opportunities in state early childhood systems.

MIECHV awardees frequently use the data to monitor performance of their local programs and to target program-wide or local CQI and evaluation efforts. Awardees also rely on the data to inform programmatic decisions and communicate their performance and impact to interested parties.

Awardees have additional grants and fiscal reporting requirements that are not specific to the MIECHV Program but are required for grants oversight and management, such as federal financial reports and annual funding applications. HRSA actively engages awardees, home visiting model developers, and other partners to identify opportunities to reduce administrative burden for awardees as outlined in the statute.<sup>25</sup>

---

<sup>24</sup> Improvement in a benchmark area is defined as meeting the measure-level improvement criteria in at least one-third of the measures under a specified benchmark area (rounded to the closest whole number), with a minimum of improvement in at least one measure for each benchmark area. Improvement for a measure is defined as meeting one or both of the following criteria: (1) any change in the intended direction for that measure as compared to baseline and (2) meeting or exceeding the established threshold for a measure, while simultaneously not decreasing performance from baseline by more than 10 percent.

<sup>25</sup> See footnote 12.

## VI. Tribal MIECHV Program

### *Tribal MIECHV Program Overview*

The Tribal MIECHV Program provides grants to Indian tribes, consortia of tribes, tribal organizations, and urban Indian organizations to develop, implement, and evaluate home visiting programs in American Indian and Alaska Native (AI/AN) communities. The Office of Early Childhood Development within the Administration for Children and Families (ACF) administers the Tribal MIECHV Program.

The Tribal MIECHV Program works toward the following goals:

- Supporting the development of happy, healthy, and successful AI/AN children and families through a coordinated home visiting strategy that addresses critical maternal and child health, development, early learning, family support, and child abuse and neglect prevention needs.
- Implementing high-quality, culturally relevant, evidence-based home visiting programs in AI/AN communities.
- Expanding the evidence base around home visiting interventions with Native populations.
- Supporting and strengthening cooperation and coordination and promoting linkages among various early childhood programs, resulting in coordinated, comprehensive early childhood systems.

In accordance with the MIECHV statute, Tribal MIECHV grants are consistent with funding provided to states and jurisdictions “to the extent practicable.” Tribal MIECHV grant recipients must conduct needs assessments and report on benchmarks. Entities that receive Tribal MIECHV funds to operate home visiting programs must develop and implement a high-quality home visiting program that is based on evidence and built to reflect the needs, strengths, and resources of the tribal community that it serves.

In FY 2022, the Tribal MIECHV Program reserved 3 percent of appropriations to support grants to Indian tribes, tribal organizations, or urban Indian organizations. The reauthorization of the program doubles the reservation for FY 2023 through FY 2027 to 6 percent of appropriations.

The program funds 5-year cooperative agreement grants under two types of funding opportunities. The Tribal MIECHV Development and Implementation Grant program funds tribal entities that have never implemented a home visiting program. The Tribal MIECHV Implementation and Expansion Grant program funds tribal entities that are currently implementing home visiting and wish to continue to serve or expand services. In FY 2022, the Tribal MIECHV Program received \$12 million and funded 30 tribal entities (seven Development and Implementation Grant recipients and 23 Implementation and Expansion Grant recipients).<sup>26</sup>

Tribal MIECHV grant recipients have the flexibility to adopt home visiting models that are either evidence-based or considered a promising approach. Model selection is designed to be a collaborative and community-driven process based on the needs and readiness assessment

---

<sup>26</sup> Throughout this report, the provided data is for the 23 Tribal MIECHV grant recipients that were implementing services in FY 2022.

findings. Currently, Family Spirit, which is a culturally tailored home visiting program that uses community-based home educators in Indigenous communities, is the only home visiting model that is considered evidence-based in tribal communities. Most Tribal MIECHV grant recipients implement home visiting models that have yet to demonstrate evidence of effectiveness in AI/AN populations and thus are considered promising approaches. Table 2 outlines the models that Tribal MIECHV grant recipients used in FY 2022.

**Table 2: Tribal MIECHV Models and Promising Approaches**

<b>Model/Promising Approach</b>	<b>Number of Grant Recipients Implementing in FY 2022*</b>
Parents as Teachers	16
Family Spirit	4
Nurse-Family Partnership	3
Parent-Child Assistance Program	1

Note:

\*One Tribal MIECHV grant recipient implemented two models in FY 2022.

### ***Tribal MIECHV Reach and Demographics of Participating Families***

In recognition of tribal data sovereignty, participant confidentiality, and grant recipient privacy, ACF engaged the Tribal MIECHV grant recipients regarding how to present data in this report. Based on the feedback, this section provides statistics in aggregate, such as averages and percentages. While informative, these figures may mask the broad variability of the Tribal MIECHV grant recipients and their communities.

In FY 2022, a total of 1,798 adults and 1,691 children received home visiting services through the Tribal MIECHV Program. Tribal MIECHV grant recipients serve remote reservations; urban areas representing families from varied tribes and villages; and other rural, urban, and suburban areas.

#### **Demographic Characteristics**

In FY 2022, more than a third of adults and children were newly enrolled in the Tribal MIECHV Program, while the rest were continuing participants. Of all adult participants, approximately 24 percent were pregnant participants, 66 percent were nonpregnant female participants, and 9 percent were male participants.<sup>27</sup>

Most newly enrolled adult participants were over the age of 25 and most newly enrolled children were younger than 2. About half (52 percent) had a high school diploma or less and 5 percent of the participants experienced homelessness.

A total of 87 percent of newly enrolled adults and 93 percent of newly enrolled children identified as AI/AN, including those who identified as being more than one race. In all, 8 percent of newly enrolled adults and 13 percent of newly enrolled children were Hispanic or Latino. Most (96 percent) of the newly enrolled children spoke English as a primary home language. Fewer than 2 percent of children spoke a Native American language as their primary

---

<sup>27</sup> Percentages do not total 100 due to rounding.

language, although 10 percent of children spoke a Native American language as a secondary language.

Most newly enrolled participants (77 percent of adults and 83 percent of children) had health insurance. Overall, 75 percent of insured caregivers and 85 percent of insured children were covered through Medicaid or the Children's Health Insurance Program. Another 18 percent of adults and 12 percent of children were not insured but had access to care through an Indian Health Service, Contract Health Services, or Urban Indian Health Program facility. Figure 6 provides additional demographic information about newly enrolled Tribal MIECHV Program participants.

**Figure 6: Overview of Newly Enrolled Tribal MIECHV Program Participants, FY 2022**

### **Priority Populations**

Consistent with the authorizing statute for MIECHV, the Tribal MIECHV Program prioritizes serving populations identified in statute, as described earlier in this report. Among newly enrolled Tribal MIECHV participants, 80 percent of the enrollees had household income at or below 200 percent of the FPL, including 56 percent of households having incomes at or below 100 percent of the FPL, and 27 percent used tobacco products in the home. Figure 7 describes the priority populations served in FY 2022.

**Figure 7: Priority Populations among Newly Enrolled Tribal MIECHV Households, FY 2022**

### ***Tribal MIECHV Performance Outcomes***

Tribal MIECHV grant recipients provide annual reports of their progress on nine “core” annual benchmark performance measures. Figure 8 shows the data for the 23 Tribal MIECHV recipients delivering services throughout FY 2022. For additional details on each performance measure and demonstration of improvement, refer to this table on ACF’s website.<sup>28</sup>

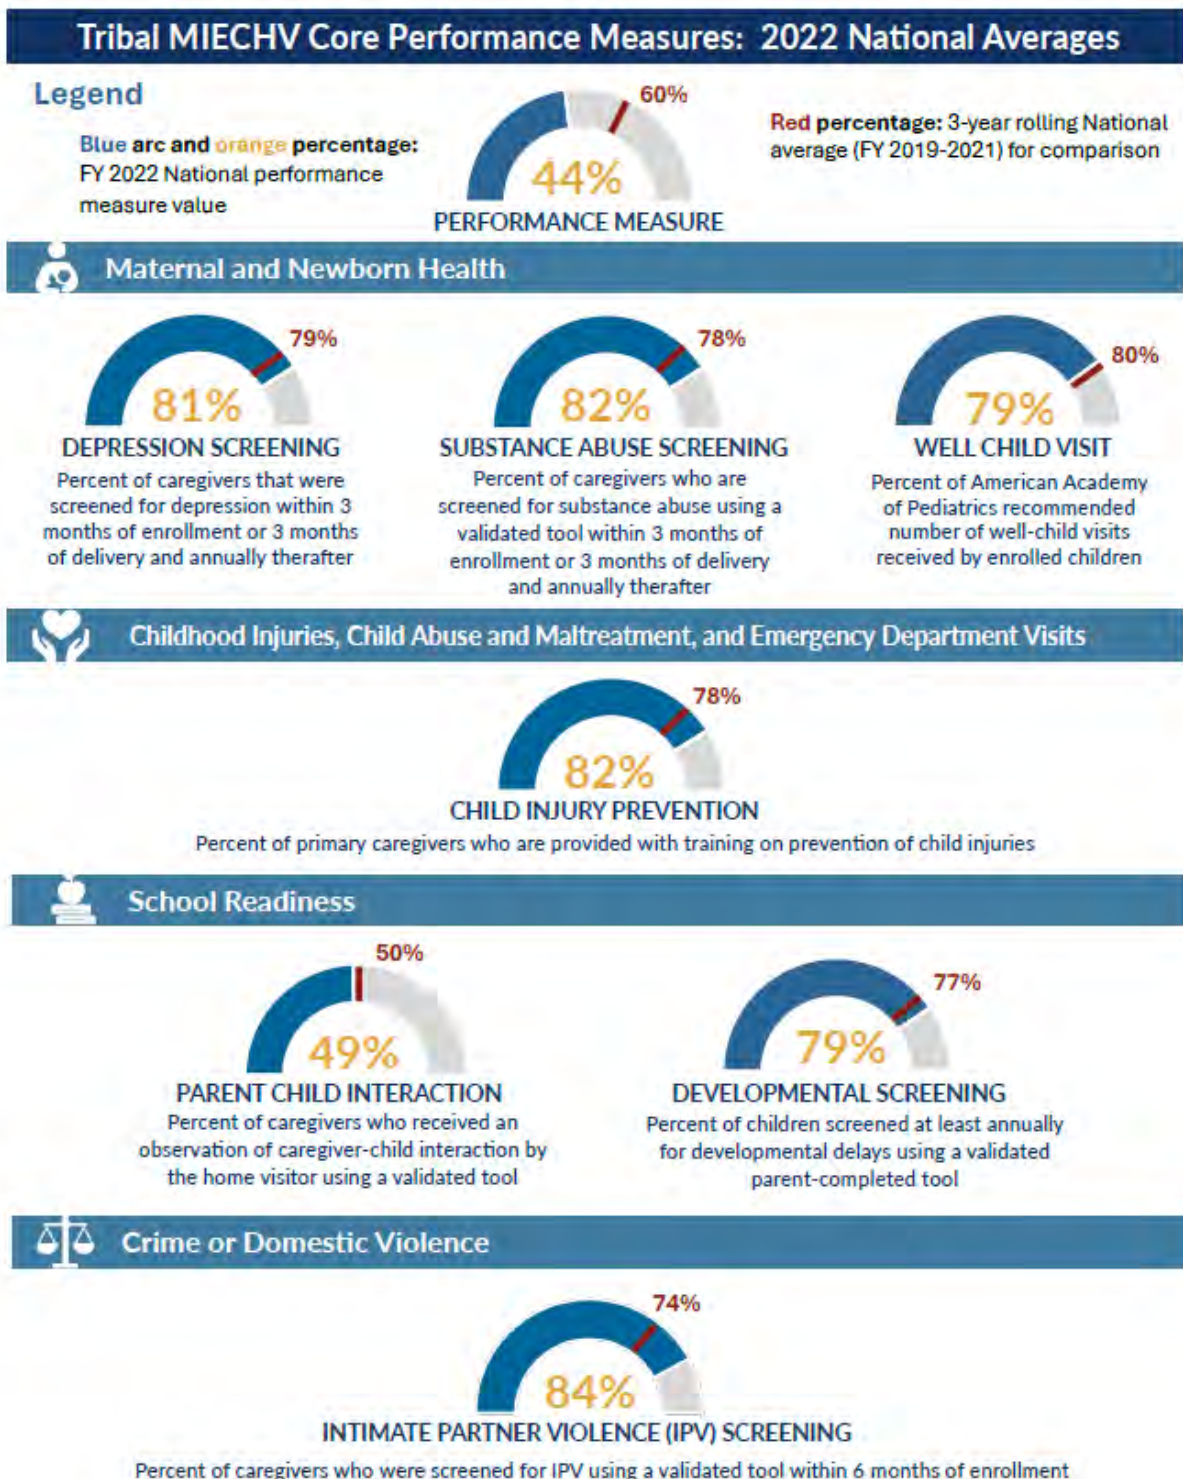

---

<sup>28</sup> See

<https://www.acf.hhs.gov/sites/default/files/documents/occ/Tribal%20Core%20and%20Flex%20Measures%20with%20Definitions.pdf>.

**Figure 8: Tribal MIECHV Performance Measures, Core Measures Only, FY 2022**

In addition, Tribal MIECHV grant recipients report on three core performance measures of implementation, as shown in Table 3.

**Table 3: Tribal MIECHV Implementation Core Measures, FY 2022**

Performance Measure	FY 2022 Average
Percentage of recommended home visits received by families	97
Percentage of home visits recommended for implementation observation that were observed by a supervisor	101*
Percentage of recommended individual or group reflective supervision sessions received by home visitors	96

Note:

\*In FY 2022, Tribal MIECHV grant recipients, on average, provided implementation observation by a supervisor for more than the number of home visits recommended for observation by model developers.

Tribal MIECHV grant recipients must demonstrate improvement in at least four of the six statutorily identified benchmark areas.<sup>29</sup> In FY 2022, most grant recipients showed improvement

<sup>29</sup> Recipients can demonstrate improvement in two ways: (1) show improvements in their performance on the benchmark between a baseline (either their first year of implementation or the prior year, depending on when they began implementation of services) and FY 2022; or (2) meet or exceed a threshold value for that benchmark (the threshold is 80 percent for benchmarks that reflect something desirable and 20 percent for those reflecting behavior or experiences that Tribal MIECHV aims to decrease). For benchmarks with two core measures, grant recipients must demonstrate improvement in at least one measure. For benchmarks with three core measures, recipients must demonstrate improvement in at least two measures. Several of the benchmark areas have core measures and flex measures, and recipients could demonstrate improvement on either core or flex measures in that benchmark area, as long as they met the minimum number of measures outlined by ACF.

in each benchmark and the vast majority (87 percent) met demonstration-of-improvement requirements in four of the six benchmarks.

### ***Tribal MIECHV Program Data Elements***

The Tribal MIECHV Program collects similar data elements to the state and jurisdiction MIECHV Program, including an annual performance report on data describing the demographics of Tribal MIECHV enrollees and home visiting staff, information about Tribal MIECHV services, and progress toward Tribal MIECHV benchmarks. Demographic data include age, race and ethnicity, gender, and education of adult and child enrollees and home visiting staff. They also include information on household economic circumstances, housing insecurity, health insurance, primary languages, presence in a priority population, and services received through the program. The performance data include measures related to screenings, referrals, home visits, well-child visits, and other services, like parent training on childhood injuries. Tribal MIECHV grant recipients also submit an annual report to the Secretary, which provides rich contextual information and details about programs and services implemented, including challenges, successes, lessons learned, and TA needs.

In addition, Tribal MIECHV grant recipients submit quarterly data on participant enrollment and caseload, the number of households currently receiving services, households that stopped receiving services, and those that completed the program; the number of households served by grantee-defined geographic service area; and the number of staff and staff vacancies. Finally, grant recipients submit ACF-required semiannual performance progress reports and federal financial reports.

## **VII. Technical Assistance**

The MIECHV Program's TA supports the efforts of the MIECHV awardees and Tribal MIECHV grant recipients to improve family outcomes and strengthen the capacity of state and local early childhood systems by connecting awardees to technical expertise, sharing best practices, engaging experts, using CQI methodologies, and disseminating and translating research findings. The TA providers collaborate to bring their expertise to the provision of TA and collectively provide high-quality, timely, and useful support through a coordinated process to address awardees' needs and requests. Resources that are relevant to all awardees (i.e., universal TA) and support for individual awardees or small groups of awardees (i.e., targeted TA) are available through a diverse set of products to meet awardee needs.

### ***MIECHV Technical Assistance Resource Center***

HRSA provides TA to awardees through the MIECHV Technical Assistance Resource Center (TARC). TARC provides individualized TA and develops user-friendly tools and resources that provide practical strategies to strengthen home visiting services. Its ongoing leadership academies build the proficiency of awardees in areas such as leadership development, policy and state systems, and fiscal management. Through the MIECHV Awardee Learning Library (an online platform for information sharing), the TARC develops and disseminates numerous resources including a quarterly e-newsletter, webinars, podcasts, communities of practice, written resources, and QuickLearns (short informational videos). TARC also convenes the

MIECHV Evaluation Coordinating Center to promote the alignment of evaluation designs and measurement strategies across awardees who conduct their own evaluations.

In FY 2022, all state and jurisdiction MIECHV awardees participated in targeted TA as well as at least one TARC offering. Each month, TARC engages almost three-fourths of awardees in targeted TA, and more than 80 percent of awardees are taking action as a result of their TA.

### ***Home Visiting Collaborative Improvement and Innovation Network***

The Home Visiting Collaborative Improvement and Innovation Network (HV CoIIN) complements TARC by bringing together MIECHV state and jurisdiction awardees and local implementing agencies to build capacity to scale up tested interventions. Now in its third iteration, HV CoIIN 3.0 is operated via a 5-year cooperative agreement to enable skill building in CQI and help disseminate effective strategies to drive improvement. HV CoIIN 3.0 provides TA monthly and on demand through virtual teaching, virtual peer sharing through collaborative networks, individual coaching, and a website of resources and materials.

To build capacity for CQI, HV CoIIN teaches quality improvement skills, reviews awardees' plan-do-study-act cycles, and supports teams with data for improvement. It also assists communities of practice focused on CQI efforts and creating a culture of improvement.

### ***Programmatic Assistance for Tribal Home Visiting***

Programmatic Assistance for Tribal Home Visiting (PATH) addresses Tribal MIECHV programmatic and implementation needs through a contract. The PATH team supports Tribal MIECHV grant recipients by increasing their capacity to implement high-quality home visiting programs within tribal communities and develop integrated early childhood systems serving AI/AN families. TA activities include providing virtual and in-person individualized learning, facilitating peer sharing and group learning events, and developing tools and resources to support grantee efforts.

In FY 2022, PATH provided 267 individualized TA sessions, supported 26 thematic or peer activities, and published many grantee-specific tools, including 107 video recordings, learning modules, resource libraries, and newsletters. PATH also published universal resources such as infographics, grantee profiles, success stories, and an issue brief highlighting how tribal home visiting programs support AI/AN families perinatally, during pregnancy, and postpartum.

### ***Tribal Evaluation Institute***

Since 2010, the Tribal Evaluation Institute (TEI) has provided Tribal MIECHV data, CQI, data systems, and evaluation support through a contract. TEI builds grantee capacity to use and understand data through an approach that honors community strengths and tailors support to grant recipients' needs, capacity, interests, priorities, and context. TEI provides universal TA on key topics and supports shared learning environments. TA takes place through emails, phone calls, webinars, trainings and presentations (virtual and in-person), written guidance, toolkits, briefs, and reports. A 2021 survey indicated that grant recipients have increased their knowledge level and skill in data collection and analysis, evaluation design, and data system management as a result of TEI's offerings.

## **VIII. Workforce Development and Support**

The MIECHV Program has long recognized that a qualified workforce is crucial for the effective delivery of early childhood home visiting services. MIECHV awardees have also consistently identified workforce recruitment and retention as a top priority for several years. Ongoing challenges with recruiting, training, and retaining a highly skilled home visiting workforce have been exacerbated by the COVID-19 pandemic and related health and social service personnel shortages.

In FY 2022, awardees identified workforce recruitment and retention as their top TA priority. In response, TARC facilitated a community of practice on home visitor recruitment, retention, and well-being and developed two tip sheets and a newsletter as additional resources for awardees. TARC also continued to support a peer network of five MIECHV awardees who are collaborating in their evaluations, which focus on workforce development and understanding the professional well-being of home visitors. These awardees are taking a strengths-based approach to defining, describing, assessing, and evaluating how well-being affects other elements of home visiting programs, such as staff and family retention and satisfaction.

Several MIECHV-funded research and evaluation projects have focused on understanding how to bolster the home visiting workforce and help guide future directions for advancing workforce development, such as the following:

- The Home Visiting Career Trajectories project collected findings on the qualifications and career pathways of home visitors and identified strategies to recruit, train, and retain qualified staff. (For more information, see *Home Visiting Career Trajectories*.)<sup>30</sup>
- The Supporting and Strengthening the Home Visiting Workforce project builds on information gained from the Home Visiting Career Trajectories project and focuses on measuring and improving home visitor professional well-being and understanding best practices for reflective supervision (a technique to support providers who work closely with families with young children in managing the complexity of relationships and powerful emotions that often accompany the work). (For more information, see *Home Visitor Professional Well-Being: What It Is and Why It Matters*.)<sup>31</sup>
- An issue brief, *Purposefully Investing in the Tribal Home Visiting Workforce*, highlighted how tribal home visiting grant recipients have invested in their staff – particularly during the COVID-19 pandemic – and summarized some key techniques that tribal home visiting program managers and supervisors used to support retention. (For more details, see the report.)<sup>32</sup>

## **IX. MIECHV Program Reauthorization, FY 2023 – 2027**

In December 2022, the authorization for the MIECHV Program was extended and funds were appropriated for FY 2023 through FY 2027. The reauthorization of the MIECHV Program

---

<sup>30</sup> Office of Planning, Research & Evaluation, An Office of the Administration for Children & Families. (2020). Home Visiting Career Trajectories. <https://www.acf.hhs.gov/opre/report/home-visiting-career-trajectories>

<sup>31</sup> Office of Planning, Research & Evaluation, ACF. (n.d.) “Home Visitor Professional Well-Being: What It Is and Why It Matters.” Supporting and Strengthening the Home Visiting Workforce (SAS-HV). <https://www.acf.hhs.gov/opre/project/supporting-and-strengthening-home-visiting-workforce-sas-hv>

<sup>32</sup> Stark, D.R. (2023) Purposefully Investing in the Tribal Home Visiting Workforce. <https://www.acf.hhs.gov/sites/default/files/documents/ece/Purposefully-Investing-in-the-Tribal-Home-Visiting-Workforce-5-3-23-%283%29.pdf>

doubled federal appropriations for evidence-based home visiting by FY 2027, including through a new matching grant option. The reauthorization introduced new program components, including an annual report to Congress, the creation of a new web-based outcomes dashboard, establishment of new parameters on the use of virtual home visiting, reduction in administrative burden, and an emphasis on providing targeted, intensive home visiting services.

Of the funding appropriated for the MIECHV Program each FY from 2023 to 2027, 93 percent is distributed as grants – 87 percent to states and jurisdictions and 6 percent to tribal organizations. This increased the total amount of funds made available for the Tribal MIECHV grants from \$12 million in FY 2022 to \$30 million in FY 2023. This major expansion of the Tribal MIECHV Program will bring evidence-based home visiting services to more tribal communities. Of the other activities:

- Two percent is set aside for workforce support, retention, and case management. Through a portion of this funding, HRSA established the Institute for Home Visiting Workforce Development and the Jackie Walorski Center for Evidence-Based Case Management in FY 2023.
- Two percent is set aside for TA to assist awardees in developing and maintaining effective, efficient programs that incorporate CQI.
- Three percent is set aside for research and evaluation and federal administration directly or through grants or contracts. This funding sustains the MIECHV Program’s research, evaluation, CQI, and performance measurement initiatives and supports effective management of appropriated funding.

The MIECHV Program appropriation for FY 2023 through FY 2027 is shown in Table 4.<sup>33</sup>

**Table 4: Appropriations, FY 2022 – 2027\***

	<b>FY 2022</b>	<b>FY 2023</b>	<b>FY 2024</b>	<b>FY 2025</b>	<b>FY 2026</b>	<b>FY 2027</b>
<b>Total Appropriations (\$ in millions)</b>	400	500	550	600	650	800
Base Grants	400	500	500	500	500	500
Matching Grants	Not applicable	0	50	100	150	300

Note:

\* Figures do not account for reservations and sequestration.

## ***Funding Formulas***

Under the reauthorization, funding awarded to states and jurisdictions will now consist of two types of grants: base grants (beginning in FY 2023) and matching grants (beginning in FY 2024). The formulas for calculating base and matching grant award ceilings are specified in statute.<sup>34</sup> For base grants, the funding formula considers each awardee’s share of U.S. children

<sup>33</sup> Appropriations for the MIECHV Program are classified as non-exempt nondefense mandatory and subject to sequestration. *Sequestration* refers to the cuts to U.S. federal government spending mandated by the Budget Control Act of 2011. The cuts went into effect on March 1, 2013.

<sup>34</sup> See footnote 12.

under age 5, while also ensuring stable funding and a minimum \$1 million award.<sup>35</sup> In FY 2023, up to \$435 million was available for awards to the 56 eligible entities that received FY 2022 MIECHV formula funding. The base grant amount available will remain consistent for MIECHV awardees through FY 2027, with the exception of reductions required by other applicable law (e.g., sequestration).

For matching grants, the amount appropriated increases each year from FY 2024 to FY 2027. The MIECHV statute defines a minimum matching grant amount for each year, and remaining matching grant funding must be made available to states and jurisdictions based on the percentage of children in those states and jurisdictions whose families live in poverty.<sup>36</sup> To obtain a matching grant, states and jurisdictions are required by the MIECHV statute to contribute \$1 in non-federal funds to receive \$3 in federal grant award funding (25 percent state/jurisdiction contribution, 75 percent federal contribution). Beginning in FY 2025, any unobligated matching grant funds from previous FYs must be distributed to interested states and jurisdictions that can meet the additional match requirement (contributing \$1 in non-federal funds to receive \$3 in federal grant award funding). The MIECHV Program will distribute funding according to each state's and jurisdiction's share of children under age 5 living in families in poverty.

### ***Institute for Home Visiting Workforce Development***

Through the new set aside for workforce support, retention, and case management, the Institute for Home Visiting Workforce Development was established in September 2023 and seeks to expand, support, and retain a diverse and qualified home visiting workforce by assessing workforce trends, researching effective workforce support practices, and providing TA to home visiting programs across the country.

The institute will serve as a central hub for resources and research across the home visiting field to further address critical workforce needs. The institute's goals are to improve the quality of MIECHV services, support home visitor professional development and well-being, and reduce the costs and disruption associated with frequent staff turnover and retraining. Housed within the institute, the Jackie Walorski Center for Evidence-Based Case Management will identify, evaluate, and disseminate evidence-based case management best practices within the home visiting context to help families access needed services. Future reports to Congress will include updates on the center as it gets underway.

## **X. Summary**

In FY 2022, the MIECHV Program reached all 50 states, the District of Columbia, and five U.S. territories and provided more than 840,000 home visits to more than 130,000 parents and children in just over 69,000 families. The Tribal MIECHV Program supported 30 tribal entities that served more than 1,700 adults and 1,600 children.

MIECHV awardees are meeting or exceeding the benchmarks established by statute to ensure that home visiting programs are providing the services communities need to enhance family

---

<sup>35</sup> Ibid.

<sup>36</sup> Ibid.

well-being. In the most recent assessment in FY 2020, all 56 state and jurisdiction MIECHV awardees met the requirements for demonstration of improvement, and FY 2022 measures indicated that awardees, by and large, are successfully maintaining or improving their programs compared with previous years. In FY 2022, most Tribal MIECHV grant recipients showed improvement in each benchmark, and the vast majority of recipients that provided services in FY 2022 met the requirements for demonstration of improvement.

In their FY 2022 performance reports, awardees described successes resulting from CQI efforts; collaborations with community partners; and improvements in data collection, monitoring, and reporting. The MIECHV Program's TA system effectively supports MIECHV awardees and Tribal MIECHV grant recipients with high-quality, timely, and useful support through a coordinated process to address awardees' needs and requests.

Data from awardees demonstrate that home visiting programs have led to substantial improvements in a number of areas, including:

- family behavior that contributes to children's early language and literacy skills;
- uptake of well-child and postpartum care; and
- screening for postpartum depression.

The MIECHV Program continues to support the health and well-being of families by developing strong relationships with families, providing regular home visits, assessing family needs, and delivering tailored services.

## Appendix C: Required Data Elements and Purpose

Required Data Element	Purpose of Data Collection	
	Measures Performance	Statutory Requirements*
<b>Form 1 (annually)</b>		
Number of newly enrolled and continuing participants <ul style="list-style-type: none"> <li>Adult caregiver/pregnant participants by:               <ul style="list-style-type: none"> <li>Age</li> <li>Gender</li> <li>Race</li> <li>Ethnicity</li> <li>Marital status</li> <li>Educational attainment</li> <li>Employment status</li> <li>Housing status</li> <li>Type of health insurance coverage</li> </ul> </li> <li>Index children by:               <ul style="list-style-type: none"> <li>Age</li> <li>Gender</li> <li>Race</li> <li>Ethnicity</li> <li>Primary language spoken at home</li> <li>Type of usual source of medical care</li> <li>Type of usual source of dental care</li> </ul> </li> </ul>	Program reach; participant demographics	(d)(5) and (j)(3)
Number of households by: <ul style="list-style-type: none"> <li>Newly enrolled/continuing</li> <li>Income</li> <li>Each priority population characteristic</li> <li>Status (currently receiving services, completed program, stopped services, enrolled but not receiving services, unknown/did not report)</li> </ul>	Program reach; participant demographics; service utilization	(d)(5)
Unduplicated number of participants and households served by state home visiting programs (non-Maternal, Infant, and Early Childhood Home Visiting (MIECHV))	Program reach of non-MIECHV funds <sup>†</sup>	
Number of home visits by service modality	Service utilization	(e)(8)(A)
Number of newly enrolled and continuing households for each home visiting model/promising approach	Service utilization	(d)(3)(A)
<b>Form 2 (annually)</b>		
Preterm birth - percent of infants (among mothers who enrolled in home visiting prenatally before 37 weeks) who are born preterm following program enrollment	Systems outcome <sup>‡</sup>	(d)(1) and (d)(2)
Breastfeeding - percent of infants (among mothers who enrolled in home visiting prenatally) who were breastfed any amount at 6 months of age	Systems outcome	(d)(1) and (d)(2)
Depression screening - percent of primary caregivers enrolled in home visiting who are screened for depression using a validated tool within 3 months of	Program outcome <sup>§</sup>	(d)(1) and (d)(2)

Required Data Element	Purpose of Data Collection	
	Measures Performance	Statutory Requirements*
enrollment (for those not enrolled prenatally) or within 3 months of delivery (for those enrolled prenatally)		
Well-child visit - percent of children enrolled in home visiting who received the last recommended visit as described in the Bright Futures Periodicity Schedule developed by the American Academy of Pediatrics	Program outcome	(d)(1) and (d)(2)
Postpartum care - percent of mothers enrolled in home visiting prenatally or within 30 days after delivery who received a postpartum visit with a healthcare provider within 8 weeks (56 days) of delivery	Program outcome	(d)(1) and (d)(2)
Tobacco cessation referrals - Percent of primary caregivers enrolled in home visiting who reported using tobacco or cigarettes at enrollment and were referred to tobacco cessation counseling or services within 3 months of enrollment	Program outcome	(d)(1) and (d)(2)
Safe sleep - percent of infants enrolled in home visiting that are always placed to sleep on their backs, without bed-sharing and without soft bedding	Program outcome	(d)(1) and (d)(2)
Child injury - rate of injury-related visits to the Emergency Department during the reporting period among children enrolled in home visiting	Systems outcome	(d)(1) and (d)(2)
Child maltreatment - percent of children enrolled in home visiting with at least one investigated case of maltreatment following enrollment within the reporting period	Systems outcome	(d)(1) and (d)(2)
Parent-child interaction - percent of primary caregivers enrolled in home visiting who receive an observation of caregiver-child interaction by the home visitor using a validated tool	Program outcome	(d)(1) and (d)(2)
Early language and literacy activities - percent of children enrolled in home visiting with a family member who reported that during a typical week they read, told stories, and/or sang songs with their child daily	Program outcome	(d)(1) and (d)(2)
Developmental screening - percent of children enrolled in home visiting with a timely screen for developmental delays using a validated parent-completed tool	Program outcome	(d)(1) and (d)(2)
Behavioral concern inquiries - percent of postnatal home visits where primary caregivers were asked if they have any concerns regarding their child's development, behavior, or learning	Program outcome	(d)(1) and (d)(2)
Intimate partner violence screening - percent of primary caregivers enrolled in home visiting who are screened for intimate partner violence (IPV) within 6 months of enrollment using a validated tool	Program outcome	(d)(1) and (d)(2)
Primary caregiver education - percent of primary caregivers who enrolled in home visiting without a high	Systems outcome	(d)(1) and (d)(2)

Required Data Element	Purpose of Data Collection	
	Measures Performance	Statutory Requirements*
school diploma or equivalent who subsequently enrolled in, or maintained continuous enrollment in, middle school or high school, or completed high school or equivalent during their participation in home visiting		
Continuity of insurance coverage - percent of primary caregivers enrolled in home visiting for at least 6 months who had continuous health insurance coverage for the most recent 6 consecutive months	Systems outcome	(d)(1) and (d)(2)
Completed depression referrals - percent of primary caregivers referred to services for a positive screen for depression who receive one or more service contacts	Systems outcome	(d)(1) and (d)(2)
Completed developmental referrals - Percent of children enrolled in home visiting with positive screens for developmental delays (measured using a validated tool) who receive services in a timely manner	Systems outcome	(d)(1) and (d)(2)
Intimate partner violence referrals - percent of primary caregivers enrolled in home visiting with positive screens for IPV (measured using a validated tool) who receive referral information for IPV resources	Program outcome	(d)(1) and (d)(2)
<b>Form 4 (Quarterly)</b>		
Number of households by: <ul style="list-style-type: none"> <li>Newly enrolled/continuing</li> <li>Status (currently receiving services, completed program, stopped services before completion, other)</li> </ul>	Program capacity; service utilization	(d)(3)(C)
Maximum service capacity	Program capacity	(d)(3)(C)
Local implementing agency (LIA) names/addresses	Program capacity	(d)(3)(C)
Counties/zip codes served by each LIA	Program reach	(d)(5)(A)
Home visiting model/promising approach implemented by each LIA	Program capacity	(d)(3)(A)
Number of full-time MIECHV staff (home visitors, supervisors, other staff)	Program capacity	(d)(3)(C)

Notes:

\* Collected data allow the Health Resources and Services Administration (HRSA) to monitor and enforce requirements under the specified sections of the Social Security Act, Title V, section 511.

† HRSA's intent for collecting participant information for non-MIECHV evidence-based and promising approach home visiting programs is to better document the reach of the MIECHV Program. MIECHV Program awardees use federal awards to leverage additional funding to expand their evidence-based home visiting services. Documenting the scope of those services will allow HRSA to better understand the breadth of evidence-based home visiting services available in states and jurisdictions.

‡ Measures program performance in outcomes that are more distal to the home visiting intervention or are less sensitive to change due to home visiting alone because of many factors, including confounding influences or differences in available system infrastructure at the state or community level.

§ Measures program performance in outcomes that are relatively proximal to the home visiting intervention or shown to be sensitive to home visiting alone.

DEPARTMENT OF HEALTH & HUMAN SERVICES OFFICE OF THE SECRETARY

Washington, DC 20201

September 09, 2024

The Honorable Ron Wyden  
Chair  
Committee on Finance  
United States Senate  
Washington, DC 20510

Dear Chair Wyden:

I am pleased to provide you with this report on the Maternal, Infant, and Early Childhood Home Visiting Program. This report was prepared by the Health Resources and Services Administration, and it is being submitted in accordance with the report requirement in Title V, section 511, of the Social Security Act, as amended by section 6101 of the Consolidated Appropriations Act, 2023 (P.L. 117-328).

This report includes information and program data on each of the requirements designated in section 6101 and related program activities and initiatives from fiscal year 2022, prior to reauthorization of the program in 2023. The report discusses how these activities and initiatives align with the mission of the Maternal, Infant, and Early Childhood Home Visiting Program. In the 2024 report to Congress, the Health Resources and Services Administration will include information on new funding reservations and funds appropriated for matching grants introduced in fiscal year 2023.

I hope you find this information helpful.

Sincerely,

/Melanie Anne Egorin/

Dear Madam Vice President:

I am pleased to provide you with this report on the Maternal, Infant, and Early Childhood Home Visiting Program. This report was prepared by the Health Resources and Services Administration, and it is being submitted in accordance with the report requirement in Title V, section 511, of the Social Security Act, as amended by section 6101 of the Consolidated Appropriations Act, 2023 (P.L. 117-328).

This report includes information and program data on each of the requirements designated in section 6101 and related program activities and initiatives from fiscal year 2022, prior to reauthorization of the program in 2023. The report discusses how these activities and initiatives align with the mission of the Maternal, Infant, and Early Childhood Home Visiting Program. In the 2024 report to Congress, the Health Resources and Services Administration will include information on new funding reservations and funds appropriated for matching grants introduced in fiscal year 2023.

I hope you find this information helpful.

Sincerely,

/Melanie Anne Egorin/
